

Update notifications for „WasteReceipt“

Procedure, as proposed in XML Ref Guide v5.00 Draft:

Procedure:

If a WasteReceiptID is not provided by a declarant any more, it will not be updated but stay in the SSN database. To delete it, a „DeleteWasteReceiptId“ message has to be created and send by the national SSN to the SSN core.

! Different to the procedure of „DeleteWaste“ Update Notifications and others

MS2SSN_PortPlus_Not.xml message

Body	1	
Notification	1	← DeleteWasteReceipts
WasteReceipt	0-∞	← DeleteWasteReceiptId
WasteReceiptId	1	
Source	1	
ProviderOfLastUpdate	1	
LastUpdateReceivedAt	1	

Procedure, proposed by Germany:

New procedure:

A new WasteReceipt-group sent by a declarant will replace an existing WasteReceipt-group.

- If a new WasteReceipt-group is sent, this new WasteReceipt-group will replace the old WasteReceipt-group. So, there is no need to use „DeleteWasteReceiptId“ to delete individual WasteReceiptId-groups.
- „DeleteWasteReceipts“ can be used to delete the complete WasteReceipt-Group (as proposed in the XML Ref Guide).
