

# Capacity Building through Enhancement of Tools

Analysis of the outcome of the pre-workshop  
questionnaire

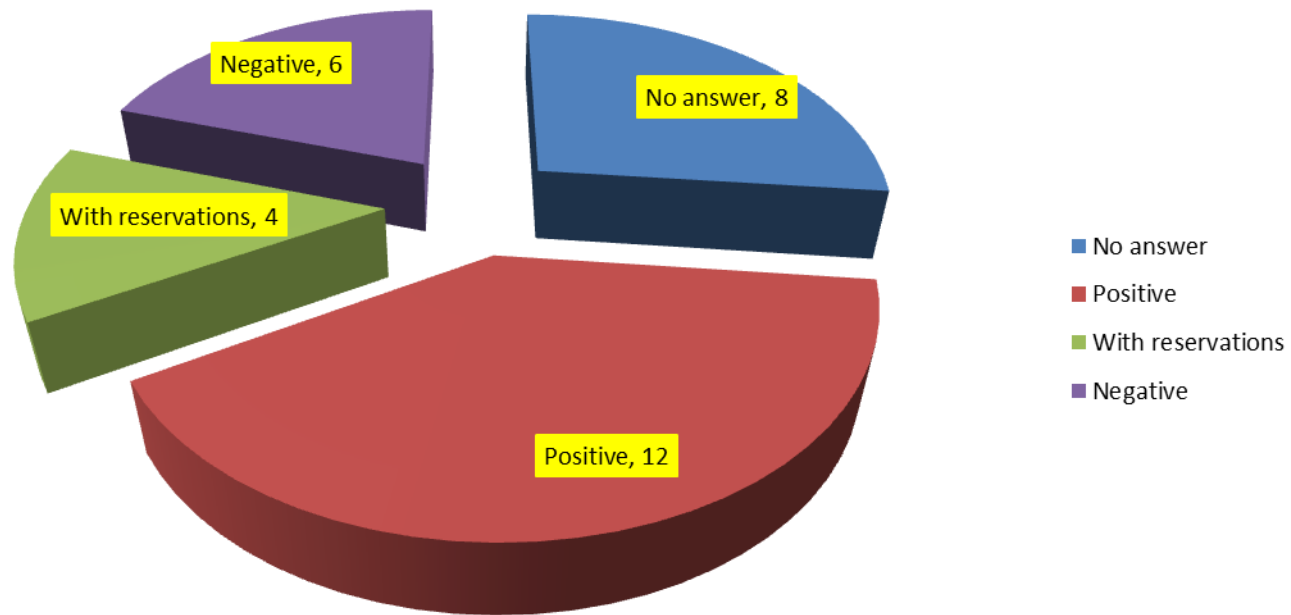

F. Rohling / Sen Project Officer  
Unit B3 - Environment and capacity building

Lisbon / 29-30 March 2017

# Question 1 Proposal for additional PSC information

EMSA could develop as additional functionality a Fair Share calculator, which could provide on a **daily basis accurate information to the competent authorities using THETIS or THETIS-EU**. In brief the functionality could display:

- Level of compliance on a daily basis at each port of the Member States with the annual inspection commitment as foreseen by Directive 2009/16/EC as amended;
- Level of compliance on a daily basis at each port with annual commitment on the frequency of sampling of marine fuels being used on board ships as foreseen by Commission Implementing Decision (EU) 2015/253;
- Level of compliance on a daily basis with any other future annual commitment foreseen by the EU legislation as relevant

## Positive

- It will be of added value
- It could offer a cost effective approach
- Each Regime should have this

## Reservation or Negative

- Already in THETIS
- Daily is not useful
- Current technical concerns
- National system in place

### Other data or functionality of the module:

Please indicate:

- any other data or functionalities for THETIS or THETIS-EU that would support Port State Control Implementation

## Q2 Port State Control, Other data or functionalities

### Input

- Complement the EU deficiencies - EMSA to investigate which EU Directives are subject to EU 2009/16 and should make a definition for the relevant items (e.g. inventory of Hazardous materials under EU 1257/2013 is missing)
- Fuel calculator and Validation Process in THETIS-EU
- Targeting if required by legislation

### Output / function:

- Compliance monitor MRV Regulation
- Staff Training status overview
- Development of a Mobile Device

- It will be of added value, for each Regime
- It could offer a cost effective approach
- Further integration in daily operations through HR management, mobile, enhancement of targeting
- Further enhancement remains needed
- National systems may be in place
- Overall cost aspect not clear yet
- Current technical concerns
