

4th CSG meeting, 9 June 2020

Incident Alerting pre-operational service (discussion paper)

Aim

The scope of this paper is to invite the CISE Stakeholder Group (CSG) members to discuss the implementation of the CISE's "incident alerting service".

Background

Within the scope of the activities for the CISE Transitional Phase, the MSEG (Maritime Surveillance Expert Group meeting held in Brussels and chaired by DG MARE) requested to establish "additional data exchange services required in the pre-operational CISE network, on which basis the operational phase of CISE will be build".

The establishment of a "pre-operational service" in the CISE network requires addressing not only technical aspects (i.e. service configuration in the node and/or the development of the software capabilities), but also operational aspects, as defining the procedure for the personnel involved in the management of the service, providing and consuming the information exchanged. Conducting this exercise will help to streamline services in a pre-operational mode during the Transitional Phase which will benefit later the Operational Phase of the project.

Establishing a pre-operational service will help the CISE stakeholders (CSG members, Node Owners, Node Administrators) to: gather experience in drafting the procedure at national level to handle the information exchanged through CISE; contribute to defining the KPI needed to implement reliable services; and test the network.

Proposal

As presented in the annex to this information paper.

Way forward

1. At the 4th CSG meeting on 9 June 2020, the CSG members are invited to take note of the information and to provide any comments.
2. The Node Owners will be invited for a meeting (in VTC) to review the proposal and agreed about the plan.
3. The implementation of this service will be conducted in collaboration with the Node Administrators participating to this pre-operational service.
4. The CSG members will be kept updated in the CSG meetings.
