

Response Structure

Training on Contingency Planning for Jordan

Brian Elliott

European Maritime Safety Agency

*Lisboa, On-line
15th – 16th June 2021*

How is the Contingency Plan implemented?

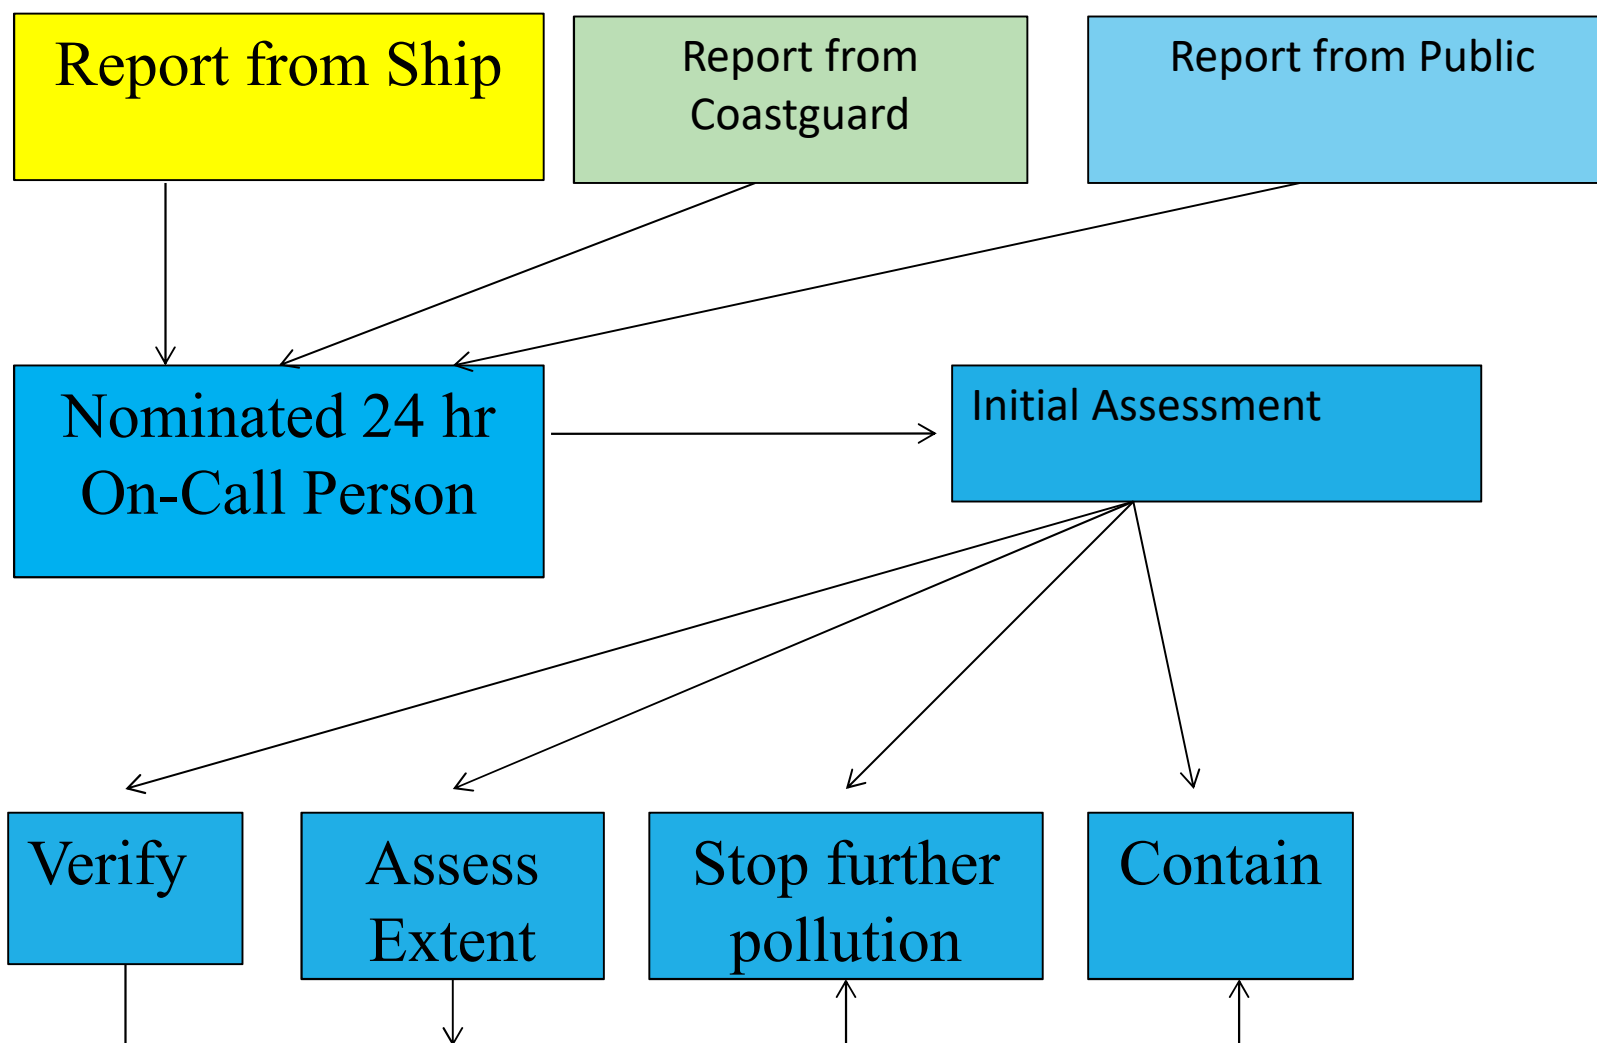

- Initial call-out
- Person receiving the call has to make the decision **how to respond**
- **Need a structure on how to do this**
- Check lists and knowledge of when to respond
 - Do nothing and monitor
 - Instant mitigation measures – Physical and absorbant booms
 - If necessary protective measures
 - If necessary clean-up methods
- Modelling and visual assessment of the spill is extremely helpful

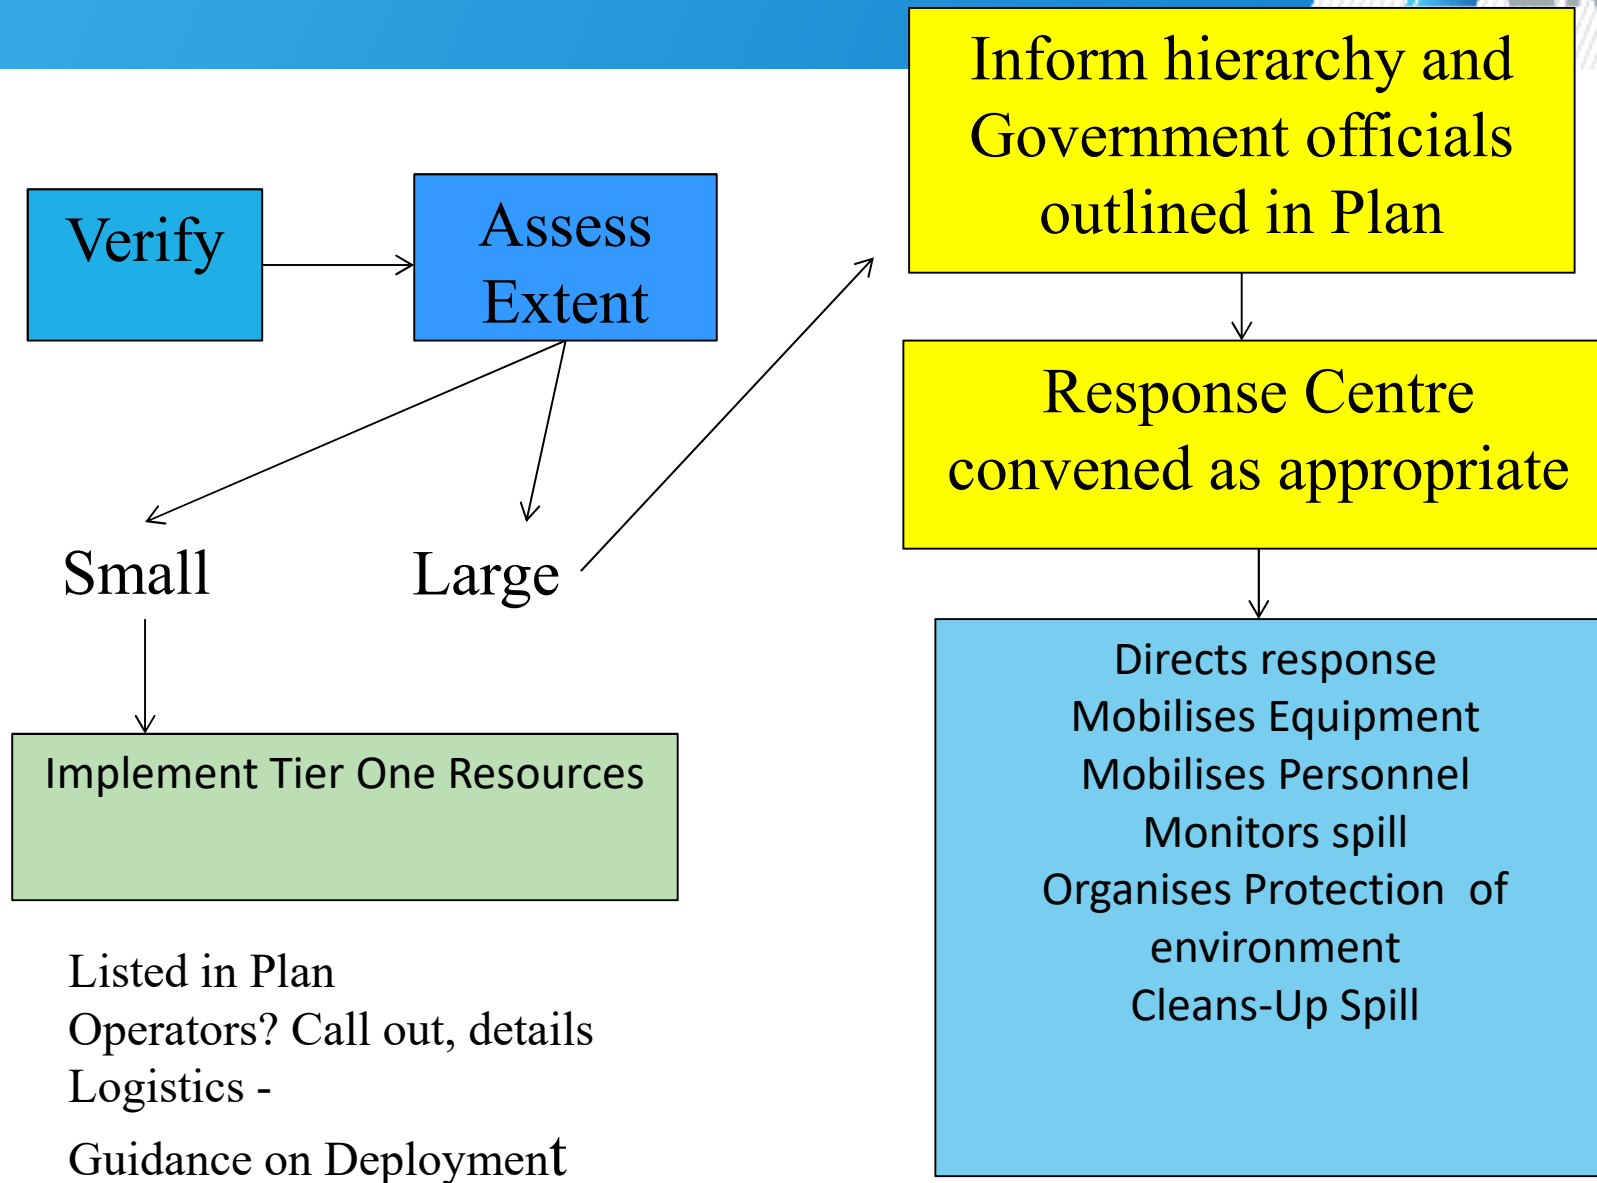

Small Spills can be handled directly by the responder using the Tier One resources

- based on agreed strategies in the Contingency Plan

Larger Spills will require more resources and Co-ordination

- Management centre required
- All Stakeholders
 - Port, Local Authority, Environmental Administration
 - Other Administrations (Maritime/Waste), Users, Owners,
- Venue and Structure need to be set out in Contingency Plan
- Marine Response/Shoreline Response.
- Operations, Finance, Waste Disposal, Oil/Chemical Experts, Etc
- Logistics of set up outlined in Plan
 - Who has what roles
 - How are they called in
 - How are decisions made?

Identify Personnel Resources

Identify equipment resources and location

Cost, mobilisation times and contact numbers

Include resource list in the data directory

List of Personnel that may be needed in the response

- People with responsibility for the Contingency Plan
- Chief Executive
- Personnel Manager
- Head of PR and PR Experts
- Head of Waste Management
- Environmental/Chemical Experts
- Personnel to mobilise equipment (operators, drivers, warehouse managers)
- Personnel to operate boats if oil is to be collected or equipment is to be deployed afloat
- Personnel to manage and undertake shoreline clean up
- Finance Officer
- Health and Safety Officers
- Administration people (Documentation is essential)
- Modellers, Aerial Surveillance (planes or drones as appropriate)
- Wildlife Spotters/ Oiled Bird Clean up Personnel/ People to collect dead animals

Details of where these resources come from, how they can be mobilised and the duties/responsibilities of each person should also be in the plan.

Any questions?

Thank you!
